

Phrazer is fully compliant and functional with most Electronic Health Records (EHR's) using an integration partner, Redox. The Redox engine specializes in secure exchange of healthcare information and offers the most robust, full-service healthcare integration solution on the market. This partnership guarantees an easy and fast integration of Phrazer allowing you to immediately experience the full benefits of the Phrazer system.

What Health Systems is Phrazer connected to?

Phrazer is pre-connected to approximately 150 health systems across the country including:

- Seattle Children's Hospital
- Fraser Health
- Greenville Health System
- Hunt Regional
- Dignity Health
- Mercy Health
- and others

Can Phrazer be integrated with your EMR?

Yes, Phrazer has been successfully integrated with all major EMR systems including:

- Epic
- Cerner
- Meditech
- eClinical Works
- NextGen
- athenahealth
- and many others

How does it work?

The Phrazer/Redox is a highly secure and safe system that will exceed your health system's requirements. The system is connected to the EMR via VPN and then desired ADT, Flowsheets, Note fields and other interchanges are engaged. The engine is fully EMR aware and creates HL7 and special messaging between Phrazer and the EMR. Now patients populate their medical record allowing staff to focus on human interactions.

How long does it take?

One of Phrazer's key value propositions is that an implementation project typically takes 4-6 weeks* and requires only 10-15 hours of time from a health system's IT staff. The integration of Phrazer can even go faster when the health system is already Redox enabled.

How much does it cost?

The cost to integrate the Phrazer system into your EMR is included in your monthly subscription fee, if you implement 25 or more devices. No hidden or additional costs. There are also no per-encounter costs so staff can utilize the solution as often as possible.

Can it perform billing activities?

Phrazer performs extensive billable activities and records the results as well as submits the proper codes for your billing department to gain reimbursements. Phrazer also offers the ability to calculate and collect patient co-pay requirements.

How about expansions?

Once the initial integration with Phrazer is completed, ongoing updates to expand workflows is efficient and lightweight. Our Integration experts make it easy to incrementally update, innovate and add integrations.
