

Phrazer/Kitsune Integration

Behind Phrazer/Kitsune is a robust architecture and management platform that provides secure EMR interchange as well as easy management and configuration of CITE tools and feature.

Seamless, secure and low maintenance is the cornerstone of CITE System interoperability. To that end GeaCom solutions are pre-configured with all major EMR distributions and integration entities (Redox, Capsule, Lyniate, etc) to perform easy, reliable and ongoing EMR exchange services. GeaCom is also a member of the CareQuality HIE program so many interchanges are immediately available without integration. If your system is not already of CareQuality or integrated with one of the hundreds of connections with 3rd party solutions, then we will be pleased to help get your program up and running in short order.

Connection Type:	VPN
Data Exchange Type:	HL7 • Secure WebServices • JSON • HTTPS
Data Placement:	Form Fields • Flowsheets • PDF • Print • On Device
Connection Ready EMRs:	Epic • MediTech • Cerner • eClinicalWorks • Greenway • AllScripts • PracticeFusion • GE Health • Athena • more...
Versioning:	Current release and historic (call for specifics)
Custom Interfaces:	GeaCom's partners are proficient in supporting and developing custom interchanges; please call for more detail
Interchange Points:	Note • ADT • Calendar • Form Fields • History • Flowsheet

Process Integrated

CITE Systems include immediate secure WiFi connectivity, device tracking, extensive print drivers and rapid alert system integration. This process requires a simple secure WiFi established access point and print server addresses.

The result is Phrazer/Kitsune patient engagements that produce paper charts, MSP codes, patient engagement summaries and decision aids for the care team. The process is light weight, typically takes only an hour or less to complete and the full services are up and running.

EMR Integrated

Phrazer/Kitsune services are integrated in dozens of Cerner programs with ease and success. The integration is fully complete within 6 weeks (includes form fields, testing and custom configuration). The fully integrated solution enables patients to author their own chart, reducing the staff data entry burden while also greatly reducing error across all demographics. The fully integrated solution enables top of licensure performance and back-to-the-bedside performance for staff. Full integration plans are available upon request.
